Claim 2

Document 1: JP, 2001-258952, A (MATSUSHITA ELECTRIC INDUSTRIAL CO., LTD.), 25
September 2001

Patent claim 1 describes “a nursing bed in which the floor panel of the head side raises and lowers freely and comprising a raising/lowering mechanism that shifts the shaft for rotation of the floor panel when the floor panel raises/ lowers ... wherein the head side mattress has an engaging part for engaging said freely raising/lowering head-side floor panel.”

Also, the floor panel (4a) has a mesh formed on its surface, as seen in Figs. 2 and 7-10.

The engaging part described in document 1 is one that engages in the range of main body frame (3) supporting the floor panel (4a), but the question of where to engage (fix) is a simple design matter, so engaging (fixing) the mesh on the surface of the floor panel (4a) and arriving at the present invention would be easy.
